Little Giant | Xero customer

Who the professional services apps are for

Accounting practices
Bookkeepers
Creative agencies
Engineering consultants
Health practitioners
IT consultants
Legal practices
Management consultants
PR agencies
Real estate agencies
Temp agencies
Training and development professionals

While the nature of professional services can differ greatly, two factors are common to them all:

1. Knowledge and people are the backbone of the business

Each practice relies on the specific professional expertise of its staff.

2. Time is ultimately the service

While the level of expertise is important, the amount of time spent working with each of the firm's clients, or on jobs for them, is the key driver of revenue and profit.

Note: This playbook does not cover financial reporting or practice management apps.

Understanding your client's business

Build a business profile

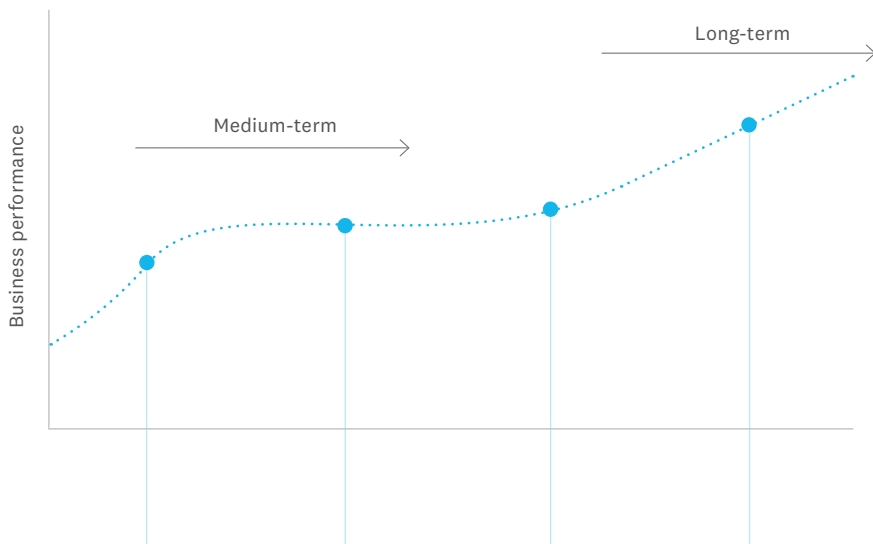

The first step to recommending the right apps for a professional services client is to learn more about their business.

We recommend building a business profile that covers these areas;

Goal	What is your client's business trying to achieve over the short and long-term? Do they want to increase efficiency, grow their business, or do both?
Pain points	Is your client looking to address a specific problem within their business? For example, tracking project time?
Financial health	Assess the current financial health of the business, if you don't already know.
Number of employees	How many employees do they have? Are they looking to grow their employee numbers or stay the same?
Job type	Do they undertake mainly high-frequency jobs, or larger project-based jobs that take longer to complete?
Current tools	Which version of Xero do they use? What apps, if any, are they using in their business today?
Technology proficiency	How experienced are they and their team with using apps and other software?

Professional services key focus areas

Below are the key areas that underpin the performance of most professional services firms. This playbook looks at each of these.

Deliver services

Achieving simplicity, efficiency and excellence day-to-day. A real-time view of what's going on, how it's going to be completed, and how that's going to turn into profit.

Realise cash flow

Ensuring healthy cash flow by realising revenue and settling bills quickly and efficiently.

Manage customers

Making sure customer relationships are managed with a focus on sustainability and growth.

Manage people

Harnessing the asset that's most critical to the current and future value of a professional services business: its people.

Shaye Thyer, BDO | Xero partner

Prioritising the key focus areas

Use the client scenarios in this table to prioritise which area to focus on first. You can then jump to the relevant section in the playbook, or if you prefer, work through the playbook end-to-end.

Client scenarios	Focus areas
<p>Client is having challenges either:</p> <ul style="list-style-type: none">• tracking profitability• delivering projects on time or within budgets	<p>Project visibility and delivery</p> <p>Achieve a real-time view of all projects, including how work will be completed and the impact it will have on the bottom line.</p>
<p>Client is having challenges either:</p> <ul style="list-style-type: none">• getting paid on-time• allocating costs and paying invoices	<p>Manage cash flow</p> <p>Ensure healthy cash flow by realising revenue and settling bills quickly and efficiently.</p>
<p>Client wants to generate further business, either through acquiring new clients or growing existing customer revenue.</p>	<p>Manage customer relationships</p> <p>Make sure customer relationships are managed with a focus on sustainability and growth.</p>
<p>Client wants to improve their processes to attract, retain and develop the right staff.</p>	<p>Manage people</p> <p>Harness the asset that's most critical to the current and future value of a professional services business: its people.</p>

Cheat sheets

for each focus area

Project visibility and delivery

Delivering profitable projects

This section is relevant to firms who deliver their services through projects and require staff members to report billable and non-billable time.

As the main operational cost for professional services firms is time, the difference between quoted and actual time spent is critical. Effectively managing revenue requires looking at each job, and making sure the revenue captured delivers a profit on the time invested.

When estimating and charging for time, professional services firms need to know their actuals so they can quote and invoice accurately and understand the profitability of each project. This is where a project delivery tool becomes invaluable.

Identify your client's needs

This page identifies the common issues with project profitability and provides a list of questions you can ask your client to help you identify opportunities to improve their revenue and efficiency.

Pain point	Questions to ask your client	Recommendation
Overinvesting, undercharging Profitability isn't known because there is no clear way of reconciling quotes with the actual time invested in a project.	Do you need more visibility into your business? Do you know which type of work brings in the most profit, where you're losing money and which clients haven't paid their invoices?	A project management app that integrates with Xero will improve your client's visibility of project performance.
Clarity on all costs Difficulty associating expenses and bills with a specific project makes it difficult to understand the true cost of a project.	Are you confident you're capturing all of your costs? If so, how do you know?	
Outgoing cash Inefficient manual processes for managing and paying bills can incur greater costs for a business.	Do you know where your cash is going? Do you pay your bills on time? Do you like to be reminded to pay invoices? Do you ever incur late payment fees?	
Productivity Manually tracking time and costs draws time away from activities that drive revenue and customer value.	Are you spending too much time on admin? Do your staff struggle to stay on top of their timesheets?	
Accountability A lack of visibility into staff activity can mean time is used inefficiently.	How are you tracking staff time? Is anyone being underutilised?	
Time efficiency A lack of access to project information can restrict progress and efficiency.	Is it important for you and your employees to work from anywhere? Do your staff often work in the field and do they need the ability to update projects on the go?	

Identify the right app for your client

Xero has two project management software options: Xero Projects and WorkflowMax.

Both are powerful tools, fully supported by Xero, giving your clients a beautiful experience and feeding even greater insights into Xero Business Edition. But which to choose?

	Xero Projects	WorkflowMax
Best reason to use	<p>Perfect for simple time and cost tracking</p> <p>Xero Projects is the simple way to track the time and money spent on each job. It provides visibility into your project financials from anywhere.</p>	<p>Highly customisable, end-to-end project management solution</p> <p>WorkflowMax is right for businesses that need to manage their workflow from quote through to invoice, while tracking time and costs. WorkflowMax helps improve project budgeting and provides critical insights into a business and its profitability.</p>
Benefits	<ul style="list-style-type: none">✓ Access everything in one place, with one Xero login.✓ Integrates with your Xero organisation.✓ Intuitive, simple to activate, and use from within Xero.✓ Supports fixed price as well as time and expenses billing.✓ Provides visibility across all jobs.✓ Monitors budgets and job costs.✓ Provides project overviews and simple reports.	<ul style="list-style-type: none">✓ Powerful financial analysis and workflow management.✓ Tracks time and costs from quote through to invoice.✓ Improves project budgeting and provides critical insights into your business.✓ Owned by Xero with real-time integration to Xero invoices and bills.✓ Highly configurable to suit various types of professional services.✓ Provides staff allocation and collaboration capability.✓ Includes a suite of standard and customised reporting.✓ Offers a tiered subscription based on the number of users.✓ Includes extensive security permissions.
More information	Find out more about Xero Projects	Find out more about WorkflowMax

Manage cash flow

Optimising cash flow in and out

This section focuses on ways to improve your client's cash flow across their entire business operation.

Cash flow can be a big challenge for small business. Staff can be late submitting expenses, customers don't always pay on time, suppliers can have unexpected payment demands, and it can be easy to put off doing the necessary (but dreaded) admin.

Optimising cash flow requires attention at each stage of your client's cash flow cycle.

Money in: from quote to invoice to payment

Generating an invoice in Xero Business Edition, Xero Projects or WorkflowMax is simple.

Once a customer has accepted a quote, an invoice is automatically generated. The table below shows how these tools can help your clients overcome common invoicing pain points.

Pain point	Recommendation
Customers don't pay invoices on time	The client can use email reminders in Xero Business Edition to automatically chase payment for submitted invoices.
Invoices are not being assigned to the correct project	If your client is using Xero Projects, create either a deposit invoice , a task invoice or a project invoice from within the invoicing or project screen. If your client is using WorkflowMax, either create a quoted invoice or an actuals invoice directly from WorkflowMax.
Creating invoices is time consuming	For clients who don't typically deliver their service via a project, Xero Business Edition is great for creating professional invoices .
Unnecessary delays receiving revenue due to inability to take immediate payment	For clients who don't typically deliver their service via a project, payment services are a good way to optimise cash flow by allowing clients to take immediate payment for their services.

Payment services: comparison of apps

Money out: bills and expenses

Bills and expenses also require close management, but they can be harder to track. You can use Xero Projects and WorkflowMax with Xero Business Edition to address the common pain points outlined in the table below.

Pain point	Recommendation
Referring back to purchase orders that don't have a clear business owner or reason	Make sure the client is clear on how to create purchase orders in Xero Business Edition . This is key to ensuring they are clear on what money is going out of the business.
Bills are received, yet often no action is taken to pay the bill, which incurs additional costs	Ensure that your client is clear on how to keep on track of the next steps for payment .
Bills administration is time consuming, costly, and takes valuable resources away from revenue-generating activities	If entering, approving or chasing bills is an issue within the business, then bill automation (supported by apps that integrate with Xero) offers numerous opportunities to improve.
Expenses appear without a clear business owner or reason	If your client isn't doing it already, using Xero Expenses* with Xero Business Edition is an easy way to improve expense processing. It makes submitting and approving expenses easy, and staff can use it day-to-day with the Xero mobile app.
Expenses are claimed outside the financial period in which they were incurred	If your client requires a tool to manage expenses at scale, or they have specific requirements for individual workflows or suppliers, Xero-integrated apps can help improve performance even further.
Managing expenses is a long process and detracts from revenue-generating activities	

*Xero Expenses is being released to replace expenses in Xero, in mid 2018.

Bill and expense automation

When clients use Xero Business Edition together with Xero Expenses or Xero-integrated apps, many parts of the bill and expenses process can be automated, meaning better efficiency, reduced errors and ultimately better outcomes for the business. See the table below to identify where to focus your efforts.

Business process	Managing bills	Expense submission	Expense approval and reimbursement
Benefits	<ul style="list-style-type: none">• Automatically upload bills and receipts into Xero.• Upload invoices and receipts via a mobile application.• Automatically publish invoices from email inbox to Xero.• Remove the need to manually input relevant data with line item extraction.• Apply specialist rules to automate approvals or remove the requirement for approval all together.• Submit files from third party apps such as Dropbox.• Post files straight into the Xero account.• Automatic currency exchange.	<ul style="list-style-type: none">• Remove the need for individual submissions, with automatic import for any expense incurred on personal or company cards.• Remove the need to enter expense information, with automatic extraction of line data.	<ul style="list-style-type: none">• Approvers: Remove the need to review every transaction by creating an automatic flag for expenses that require approval.• HR and hiring: Reimburse job applicant expenses through a bespoke process with real-time entry of information and expense details.• Travel policies: Automatic integration with leading travel management providers, to ensure compliance where required.• Travel providers: Automatic integration with leading travel service providers to achieve a seamless experience for employees.

Manage customer relationships

Customer relationship management

Effectively managing customer relationships is key to the sustainability and growth of your client's business.

Customer relationship management (CRM) systems help to manage these important relationships effectively, while giving your clients more time to spend on revenue-generating activities.

Here are the four key stages of customer relationship management:

Attract

Drive and optimise leads coming into the business, and manage prospective customers as a potential source of revenue.

Convert

Ensure the right focus and resources are in place to make sales and secure additional revenue.

Retain and grow

Maintain consistent levels of service to retain your clients and expand the spend of the right clients.

Assess

Use customer data to identify opportunities and focus on the ones that will achieve the business's goals.

Identify your client's CRM needs

The table below identifies the common client scenarios and provides a list of questions you can ask your client, to help you identify which area to focus on first. Then check out the following comparison matrix to compare various Xero-integrated apps.

Client scenario	Questions to ask your client	Recommendation
Client wants to attract potential customers	<ul style="list-style-type: none">Do you have a clear and accurate view of how many potential customers come to your business each month?Do you know how much this equates to in potential revenue?Do you retain contact information for both won and lost business?Do you continue to engage with lost and previous customers?Are your staff responsible for bringing customers into the business?Do you have a marketing department?	A customer relationship management app that integrates with Xero will improve your client's visibility of prospects and leads.
Client wants to convert potential customers into paying customers	<ul style="list-style-type: none">How do you currently track lead conversion?Are you able to monitor what potential business has been followed up (and converted into new business)?	
Client wants to retain and grow existing customers	<ul style="list-style-type: none">Do you have a regular communication plan to update your customers on the status of their projects?Do you have a consistent way to keep in touch with customers who have used your services?Do you have a plan to grow revenue from regular customers?	
Client wants to assess existing and potential business opportunities	<ul style="list-style-type: none">Do you know which customers bring you the highest revenue?Do you know which type of work or project delivers you the most revenue?Do you retain and review information relating to lost customers?Do you develop an annual revenue and profitability plan based on insights from the previous year?

Manage people

Human resource management

People are crucial to any business, but for professional services firms they're often the most important asset.

Look at your client's HR and payroll processes so you can identify how they can be improved to retain and nurture staff. Refer to the four key areas of HR management below:

Payroll and leave

Ensure payroll and employee leave management is accurate, compliant and easy for your staff to understand.

Track

Gain a clear understanding of where employee's time is invested.

Connect

Share key information and enhance a collaborative culture with easy staff communication.

Nurture

Achieve a clear view of who the top performers are within the firm, with a clear path for development.

Identify your client's HR management needs

The table below identifies common client scenarios and provides a list of questions you can ask your client to help you identify which area to focus on first.

Client scenario	Questions to ask your client	Recommendation
Client has difficulty managing payroll and leave, either spending a lot of time on manual processing or incurring a high error rate	<ul style="list-style-type: none">Do you have a tool in place to manage payroll and leave accrued by your staff?Do you have an easy way to submit compliance-related information?Do you often come across errors in customers getting paid?Do managers have an easy way to approve leave (without accessing personal information)?Do your employees have a clear place to access their payroll and leave information?	The client can use Xero Business Edition to manage payroll and leave, while creating an easy experience for their staff.
Client does not have a clear view of an employee's contribution or deliverables	<ul style="list-style-type: none">Do you have a clear way of tracking the contribution of each of your employees?Do you wish to track what people deliver?	The client would benefit from integrating an HR app with Xero Business Edition.
Client is struggling with internal communications	<ul style="list-style-type: none">Do you have an efficient method in place for communicating with your staff?Do you feel that your staff are highly engaged in the the business (as well as in project-specific matters)?	
Client does not have a clear view of training and performance	<ul style="list-style-type: none">Do you have a structure or tool in place to conduct and track performance reviews?Do you have a way to plan and allocate training?
